

Silencers of type L25 are specifically designed for applications with critical noise demands for low frequencies. These silencers can be applied for exhaust as well as inlet damping for 2 and 4 stroke internal combustion engines.

They are based on the reflection principle and are often applied as a single silencer for 1, 2 and 3 cylinder engines. Very good sound reduction across the entire frequency range is possible in combination with an absorption silencer of type HM or HXM. Many such combinations are used in bow screw installations, (emergency) diesel generating sets, combined heat and power installations and others. Because of their frequent use, they are usually available from stock.

Mounting

L25 silencers may be mounted in any position, considering of course the indicated direction of flow. By use of our supports and mounting brackets easy fitting of the silencers is possible.

Note!

Exhaust systems of internal combustion engines are subject to pulsations and other vibration phenomena, therefore it is recommended to mount the entire exhaust system free from such vibrations, by applying suitable vibration isolators. As we are exhaust system specialists, we of course can provide a complete program of vibration absorbers and expert advice by our engineers.

Quality and safety

Our manufacturing process from design to delivery is in conformity with the ISO 9001:2000 standard, for which we have been certified. Our silencers are built-in components, therefore no CE marking applies. However in the description of your final product you will have to indicate potential dangers, for example risk of burns. Therefore we have put a label on your silencer in advance.

Technical specifications

Attenuation	15 - 20 dB
Recommended designed gas flow	min. 20 and max. 50 m/s
Pressure drop silencer	see CW-values in the following chart
Maximum allowable gas temperature	600°C: applies to S 235 JR G2. For other temperatures / materials please ask for our advice.
Material	S 235 JR G2; Stainless-steel, Corten or others are optional
Preservation	anticorrosive heat-resistant coating (anthracite).
Insulation	as the body virtually will take the temperature of the medium, in many cases lagging will be necessary. Additional insulation may be needed when noise breakout of the body is a decisive factor for achieving the noise demand.
Flanges	drilled according to EN1092-1 type 01 table 11 (DIN 2573 PN6). Other flange models on request
Identification	plate with silencer type and order number
Options	single or double inlet, radial in- and/or outlet positions, mounting supports, condensation drain, QAQC planning and/or certificates, integrated catalytic converter
